RenewMap

Visualising Australia's Energy Future

ABOUT RENEWMAP

- RenewMap is a web-mapping platform providing a simple and intuitive interface to visualise the Australian energy landscape.

- RenewMap seamlessly illustrates project locations and boundaries, backed by a comprehensive database of over 3,000 energy projects across Australia and New Zealand Aotearoa

WHY RENEWMAP?

- RenewMap provides market intelligence to help you stay ahead of curve.

- Keep track of a broad range of project data, including technology, developer, owner, size, status and Local/State/Federal development approval status and more.

- Increase your efficiency by streamlining research and decision-making processes using a single, consolidated platform.

SUBSCRIPTION

- RenewMap is licensed as an annual subscription service, with plans ranging from single user up to enterprise licensing.
- Contact us for more information or a tailored proposal.

FEATURES

- Project database with up-to-date spatial data and project information on more than 3,000 energy projects.

- Export project data or high resolution images of the map for further analysis.

- Use API access to the database to integrate real-time spatial and project data with internal systems like QGIS, ArcGIS, PowerBI and more.

- A simple, easy to use mapping interface with Advanced filtering capabilities to filter, search and select projects based on any data field.

- High level of visual detail shows project development and infrastructure footprints and underlying property details and land use.

- Satellite imagery, street view and high-resolution wind and solar resource base maps. Overlay Renewable Energy Zones, historical Marginal Loss Factors and more.

- Overlay existing operating transmission networks and new transmission developments.

- Explore a wind turbine database of over 20,000 turbine locations and infrastructure details like wind turbine OEM, generator capacity, hub height, rotor diameter and more.
